Solar PV System

Iammeter Solar PV System, You can monitor the energy flow of the solar pv system.

1. Introduction

You can monitor the energy flow of the solar pv system.

2. Solar PV System overview

3. You need to get the following data from influxdb

inverter_power

feedin_power

load_power

grid_consumption_energy

exported_energy

yield_energy

selfuse_energy

load_energy

self_consumption_rate

grid_consumption_energy_hourly

exported_energy_hourly

yield_energy_hourly

selfuse_energy_hourly

load_energy_hourly

self_consumption_rate_hourly

grid_consumption_energy_daily

exported_energy_daily

yield_energy_daily

selfuse_energy_daily

load_energy_daily

self_consumption_rate_daily

grid_consumption_energy_monthly

exported_energy_monthly

yield_energy_monthly

selfuse_energy_monthly

load_energy_monthly

self_consumption_rate_monthly

4. More

By installing only one WEM3080T (three phase WiFi energy meter) in your single phase solar system, and clamping the first CT onto grid, the second CT onto solar inverter and the third CT onto load if applicable, you can monitor "Grid Consumption Energy" (the energy consumed from the grid), "Exported Energy" (the energy exported to the grid) and the energy produced by solar inverter.

Enjoy and have fun on [lamMeter](#)

Revisions
